**NOTIFICATION FOR GROUND TRUTHING FOR KHARIF 2026 DROUGHT
INTENSITY ASSESSMENT**

- Sub:** Cabinet Decision dated 13.08.2026 regarding conduct of Ground Truthing for drought assessment.
- Ref:**
- 1 Manual for Drought Management 2020
 - 2 Operational Guidelines for Administration of the State Disaster Response Fund and National Disaster Response Fund vide letter dated 30th June 2026
 - 3 Integrated Drought Assessment by KSNDMC as per the Manual for Drought Management, 2020 for the Period from 1st June to 12th August 2026

Preamble

As on 13th August 2026, the State has received 411 mm of rainfall against the normal rainfall of 579 mm, i.e., deficit of 29%. Rainfall has been deficit across all four meteorological regions of the State.

The temporal distribution of Southwest Monsoon rainfall has been highly erratic, characterised by prolonged dry spells interspersed with isolated episodes of heavy rainfall. The resultant rainfall deficit and consecutive dry spells have adversely affected agricultural operations, soil moisture availability, Kharif sowing and crop growth. In several areas, poor seed germination and crop establishment have been reported, while standing crops are exhibiting moisture stress, including wilting, yellowing/discolouration and stunted growth.

The Manual for Drought Management, 2020, issued by the Ministry of Agriculture & Farmers' Welfare, Government of India, prescribes an objective, transparent and evidence-based three-stage methodology for drought assessment and declaration, as follows:

Stage 1 – Mandatory Indicators:

The first drought trigger is assessed based on:

- Seasonal and cumulative rainfall deviation from normal; and
- Occurrence, duration and persistence of dry spells.

Stage 2 – Impact Indicators:

Upon activation of the first trigger, the following impact indicators are assessed:

- Sowing Progress: Deviation in area sown from normal, delayed sowing and crop establishment failure.
- Remote Sensing-based Vegetation Indices: NDVI/VCI and assessment of crop vigour and vegetation stress.

- **Soil Moisture Indicators:** Surface and root-zone soil moisture availability and adequacy for crop growth
- **Hydrological Indicators:** Reservoir storage, groundwater levels, streamflow and surface water availability

For assessment under Stage 2, the State may consider any three of the four categories of impact indicators and arrive at a considered assessment of the occurrence and severity of drought.

Stage 3 – Ground Truthing:

Where the second drought trigger is activated, sample-based Ground Truthing (GT) is undertaken through mobile application. The findings of the field verification are used for determining the intensity of drought as moderate or severe, based on the extent of crop loss.

Further, the Guidelines on Constitution and Administration of the SDRF and NDRF referred at No.2 above, issued by the Government of India, stipulate that drought declaration and assessment of its severity shall be undertaken in accordance with the procedure prescribed in the Manual for Drought Management, 2020. Accordingly, all stages of drought assessment, including scientific assessment through prescribed indicators and mandatory field verification through Ground Truthing, are required to be undertaken in accordance with the provisions of the Manual.

As stipulated under Chapter 3.3 – Process for the Determination of Drought (Page 45) of the Manual for Drought Management, 2020, the Drought Monitoring Cell of the State, Karnataka State Natural Disaster Monitoring Centre (KSNDMC), is responsible for continuous monitoring of critical drought parameters and for apprising the State Government regarding the spread and severity of any emerging drought situation.

Accordingly, KSNDMC has carried out a scientific assessment of the drought parameters prescribed in the Manual for Drought Management, 2020 and submitted its assessment report for the time period from 1st June to 12th August to the State Government. As per the KSNDMC Integrated Drought Assessment, i.e., Trigger-1 (Mandatory Indicators) and Trigger-2 (Impact Indicators), total of 102 taluks has qualified for Step 3 – Ground Truthing. The list of taluks qualifying for Ground Truthing is enclosed as Annexure-1.

As prescribed in the Manual for Drought Management, 2020, Ground Truthing (GT) shall be conducted in 10% of the villages in each taluk that has qualified for Ground Truthing, with the villages being selected on a random basis. In each selected village, representative locations (approximately five sites for each major crop) shall be inspected for field data collection.

The Ground Truthing exercise is carried out using an exclusive “Crop Loss GT” Mobile Application developed by the DPAR (e-Governance). The application captures details of the crop and the extent of damage, geo-tagged photographs, GPS coordinates, land particulars, and ownership details, thereby ensuring transparency, accuracy, and uniformity in the assessment process.

Based on field verification, a GT qualified taluk shall qualify for declaration of drought if the estimated crop loss is 33% or more. Where the estimated crop loss exceeds 50%, the drought may be classified as Severe. The findings of the Ground Truthing exercise shall be final for determining the intensity of drought as Moderate or Severe. Further, where 80% or more of the Ground Truthing observations indicate crop loss exceeding 50%, the State Government has the option to upgrade the intensity of drought from Moderate to Severe, in accordance with the provisions of the Manual.

In view of the circumstances stated above, the schedule for conducting Ground Truthing (GT) in the taluks that have qualified for GT is as follows:

Sl. No	Event	Date
1	Re-orientation on GT	14-08-2026
2	Selection of crops, Formation of GT teams and Randomization of GT villages	14 th to 17 th August 2026
3	GT verification at field	18 th to 20 th August 2026
4	Completion of GT and submission of Form 11 of GT village (Agriculture and Horticulture Department to Consolidate and collage Form 11)	21 st to 22 nd August 2026

The Deputy Commissioners and Chairpersons of the District Disaster Management Authorities, shall scrupulously adhere to the procedure and instructions prescribed in the *Manual for Drought Management, 2020* and ensure strict compliance with the timelines specified above.

The taluks qualifying for Ground Truthing (GT) are identified based on the scientific assessment undertaken in accordance with the *Manual for Drought Management, 2020*, for the period from 1st June to 12th August 2026.

The assessment by KSNDMC will be conducted on a weekly basis until the end of the Kharif 2026 season, considering the likely deterioration in crop conditions in view of the forecast rainfall for the second half of August and September.

The weekly assessment of KSNDMC will be placed before the Cabinet for consideration and approval for conducting GT in the qualifying taluks. Accordingly, Ground Truthing will be treated as a continuous process and will be undertaken in taluks qualifying for GT based on the subsequent weekly assessments, until the end of the Kharif 2026 season.

NOTE ON TALUKS QUALIFIED UNDER THE INTEGRATED DROUGHT ASSESSMENT AS ON 12 AUGUST 2026

As per the Government of India Manual for Drought Management, 2020, drought assessment is undertaken through Trigger-1 (Mandatory Indicators) followed by Trigger-2 (Impact Indicators). Under Trigger-1, rainfall deviation and dry spell conditions are assessed. The taluks qualifying under Trigger-1 are further assessed based on impact indicators including agriculture/crop sowing, remote sensing-based vegetation indices, soil moisture and groundwater indicators. The final drought category is determined through the integrated assessment of Trigger-1 and Trigger-2.

As on 12 August 2026, 121 taluks qualified under Trigger-1 (Mandatory Indicators). Based on the Integrated Drought Assessment (Trigger-1 + Trigger-2), 102 taluks across 25 districts qualified under the prescribed criteria. Of these, 57 taluks were classified as Severe and 45 taluks as Moderate.

In accordance with the prescribed in the Manual for Drought Management, 2020, Ground Truthing procedure, the Moderate/Severe drought affected taluks may be taken up for field level Ground Truth Verification to assess and verify the actual crop affected and drought impact on the ground. The district-wise list of the 102 qualified taluks is enclosed as Annexure-I.

The Ground Truth Verification shall be carried out as per the prescribed procedure and the observations shall be considered for further drought assessment.

Damage to Agricultural Crops due to Drought

Name of Village _____/Taluka/Tehsil/Block/Mandal/ _____ District _____

[illegible]

@ Standard/Normal Yield: Standard yield for the crop, in the corresponding drought declaration unit (District/Taluk/Block/GP etc.), is the average yield of best five years out of past seven years.

Expected Yield: Expected Yield is to be estimated by eye survey by a team comprising of officers of Revenue, Agriculture, Relief/Disaster Departments of the State, experienced Agriculture Professional and farmers/ stakeholders.

applicable for the river systems having perennial flow characteristics. In case of intermittent and ephemeral flow characteristics, joint probability distribution approach is required to be used for estimation of truncation level. The SFDI suffers from limitation arising from the non-availability of historical data (30 years or more) which may sometimes result in erroneous assessment of stream-flow drought characteristics, particularly with regard to non snowfed river systems. States may consider installing stream gauging station-one for every 100sq km to help develop prognostic tools for understanding supply availability vis a vis demand.

3.2.5 Other Factors

The State Governments may further monitor socio-economic indicators such as the following factors in making a holistic evaluation of drought:-

- Extent of fodder supply and its prevailing prices compared to normal prices and information on cattle camps (see Forms 5 and 6, Annexure-1);
- Scarcity of drinking water supply (human and livestock) (see Forms 7 and 8, Annexure-1);
- Demand for employment on public works, and unusual outmigration of labour in search of employment (see Form 9, Annexure-1);
- Current agricultural and non-agricultural wages compared with normal times (see Form 9, Annexure-1);
- Supply of food grains, and price situation of essential commodities (see Form 10, Annexure-1).

These socio-economic indicators may aid State Governments in fine tuning the assessment of drought. However, State Governments will need to set up credible data bases and monitoring systems for objective evaluation of distress migration, price trends of fodder and food commodities, availability of drinking water etc.

3.2.6 Ground Truthing or Verification

The Ground Truthing shall be carried out only in case of districts/sub-districts where prescribed indices show moderate/severe drought conditions. It has to be conducted well before harvesting and as soon as the trigger 2 is set off.

The Ground Truthing (GT) must be conducted in each of the 10% of the drought affected villages, selected on a random basis. In each of the selected villages, representative locations (about 5 sites for each of the major crops), may be inspected for data collection. The GT shall preferably be conducted using a smart phone based App. The App shall record the GPS coordinates of the site and the photo of the state of crop, with the provision to upload these parameters on a computer server for archiving for postfacto analysis. Inspection of isolated and small fields (< 1 acre) should be avoided to improve the quality of field data. The States may identify the relevant crop/field attribute data for the Mobile App.

Appropriate inspection protocols may be developed for providing guidance in collection of data. An estimation of crop damage / loss of 33% or more on the basis of field verification will qualify for the declaration of drought. However, for the drought to qualify as one of a 'severe' nature, the estimation of damage / loss to crops should be more than 50%. Form-11 at Annex-1 has been suggested for the compilation of village wise data on damage to sown crops.

It may be noted that this system of GT collection is objective based on technology and only for the purpose of declaration of drought. GT should not be confused with the traditional system of girdawari/paisevari/annevari etc., which are basically done for assessing the impact of drought and will be used for selection of beneficiaries.

3.3 PROCESS FOR THE DETERMINATION OF DROUGHT

The Drought Monitoring Cells (DMCs) in the States will monitor data regularly on various critical parameters and apprise the SEC/Disaster Management Department in the State Government on the spread and severity of an emerging drought like situation. The complexity of drought cannot be captured with the aid of a single indicator, but requires a more comprehensive understanding of data on several parameters read in conjunction with rainfall, the most important and mandatory parameter in any determination of drought and bolstered by a field verification. Table 3.12 sub para 3.3.1 below provides a simple matrix to help make an objective assessment of drought.

3.3.1 Steps in the Determination of Drought

Following steps are suggested for the determination of drought:

Step 1: Mandatory Indicators viz. RF deviation or SPI or Dry Spell will be considered as per matrix at Table 3.11 to assess if the first drought trigger is set off.

Table 3.11: Matrix for rainfall deviations and dry spells (Trigger-1)

Index/SPI	Dry Spell	Drought trigger
Deficit or scanty rf/SPI < -1	Yes	Yes
Deficit or scanty rf/SPI < -1	No	Yes if rainfall is scanty or SPI < -1.5, else No
Normal rf/SPI > -1	Yes	Yes
Normal rf/SPI > -1	No	No

Step 2: In the event that the first drought trigger is set off in Step 1, the Impact Indicators will be examined as per the matrix at Table 3.12.

Table 3.12: Matrix for impact indicators (Trigger-2)

Rainfall Indices		Impact Indicators			
Rainfall Deviation (RFdev) or SPI	Dry Spell	Agriculture Crop Area Sown	Remote Sensing VCI or NDVI & NDWI Deviations	Soil Moisture PASM / MAI	Hydrology SFDI / RSI / GWDI

The States may consider any three of the four types of the Impact Indicators (one from each) for assessment of drought, the severity of the calamity and make a judgement.

Explanation :

The severity of the drought will be contingent upon the values of at least three out of four Impact Indicators viz, Agriculture, Remote Sensing, Soil Moisture and Hydrology in the following manner:

- Severe drought: if at least two of the selected 3 impact indicators are in 'Severe' category and one is in 'Moderate' category.
- Moderate drought: if at least two of the selected 3 impact indicators are in 'Moderate' category.
- Normal: for all other cases.
- Trigger 2 will be set off in the event of a finding of 'severe' or 'moderate' drought.
- *The State has an option to reduce the drought category by one rank (i.e. Severe to Moderate) if the irrigation percentage of the administrative region (District/Taluk/Block/Mandal), for which drought is being declared is more than 75%. However, in such a situation of reduction of drought intensity from 'Moderate' to 'Normal', the State Government will still be required to conduct field verification as prescribed in Step 3 below.*

Step 3: In the event that trigger 2 is set off (**severe or moderate**), States will conduct sample survey for ground truthing as described at 3.2.6. The finding of field verification exercise (GT) will be final for judging the intensity of drought as 'severe' or 'moderate' depending on the crop loss.

In case, 80% of GT reveals crop loss of more than 50%, states have option to upgrade the intensity of drought from Moderate to Severe category.

The criteria for declaration of drought will be the same in case of consecutive droughts.
